"EECP is the first allopathic treatment which does not involve invasive procedure or medication, but provides clinical improvement to cardiac patients in a natural way"

-Sri Sri Ravi Shankar

US FDA Approved

# Natural Bypass EECP THERAPY

**BEFORE  
EECP**

**AFTER  
EECP**

Natural Bypass Therapy

- Developes Collaterals ♥
- Reduces Chest Pain ♥
- Increases Stamina ♥
- Improves Breathing ♥
- Inreases Heart's Pumping ♥

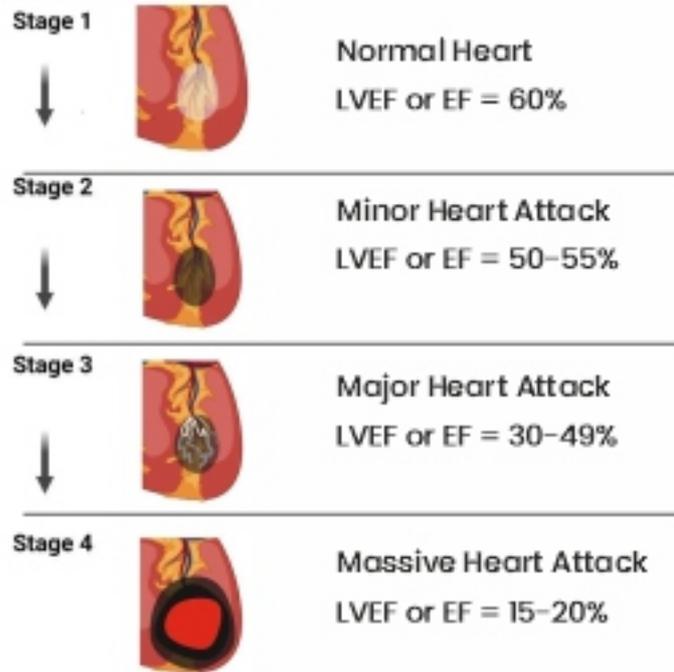

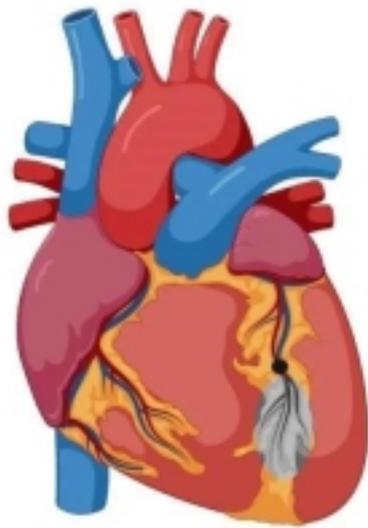

## Dr. Krish P. Vaidya

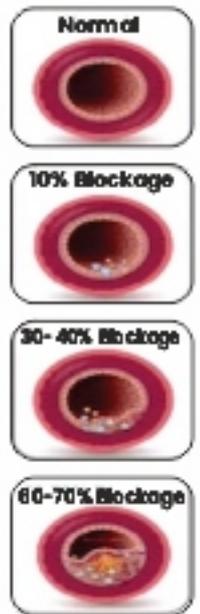

Consultant Cardiologist  
Member- American Collage of Cardiology  
M.B., PGD Cardiology (Tex. American univ.)  
Fellow. Diabetology (Liverpool univ. U.K.)  
Ex. Sterling Hospital & Rhythm Heart Vadodara.

# "Natural Bypass" Therapy

# What is Natural Bypass Therapy?

Natural Bypass Therapy, also known as EECP (Enhanced External Counterpulsation), is a non-surgical treatment that stimulates the development of new blood vessels (collateral circulation) around blocked arteries.

## How It Works

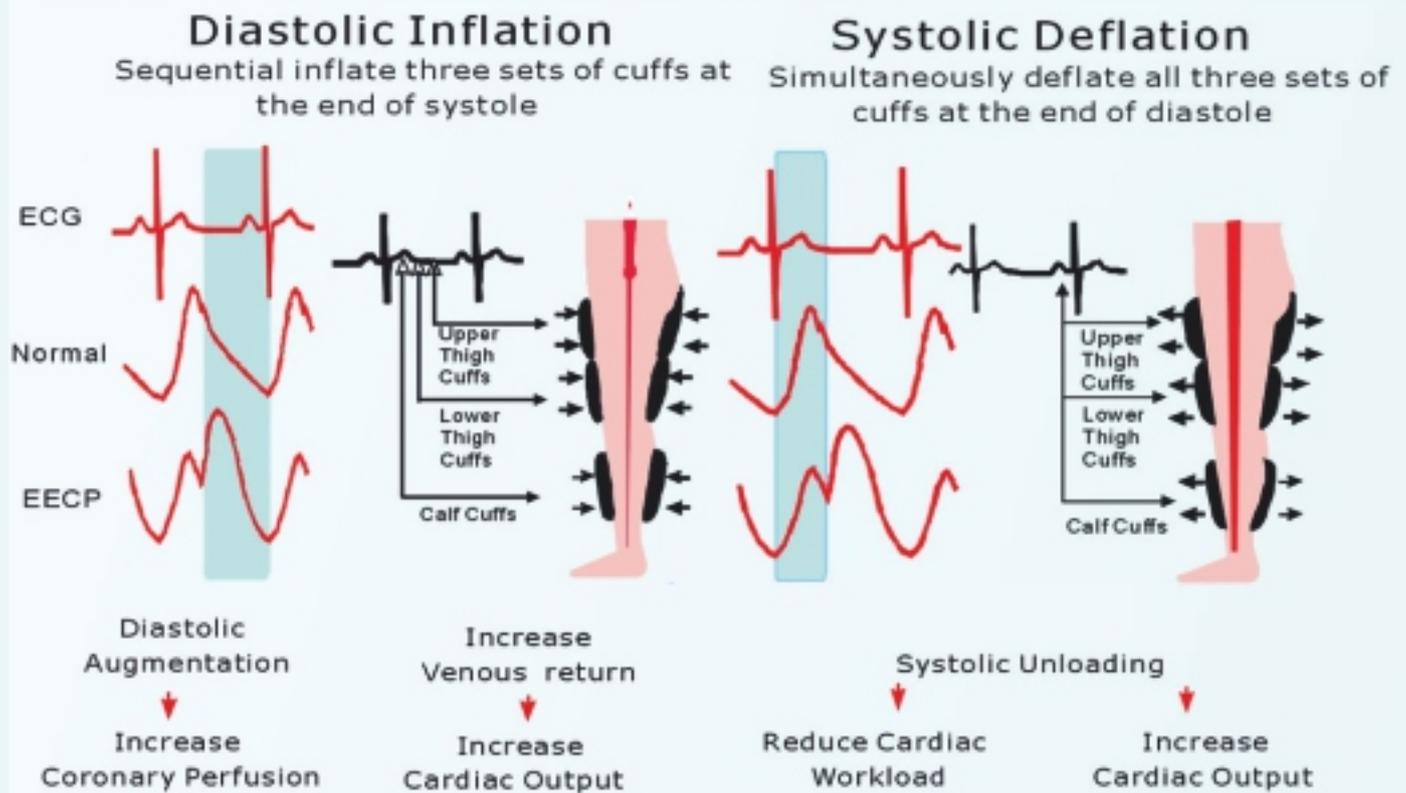

By applying rhythmic pressure on the legs using inflatable cuffs, blood is pushed back to the heart during diastole. This increases oxygen supply and encourages the formation of natural bypasses around blocked arteries.

## What is Collateral Circulation?

Collateral Circulation  
Consists of small blood vessels that form to bypass narrowed or blocked arteries

## Mechanism of EECP/Natural Bypass

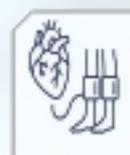

## EECP Improves Low LVEF

EECP therapy has been shown to help improve low LVEF (Left Ventricular Ejection Fraction) which is Pumping and functional capacity of the Heart.

### Safety of EECP

It is US FDA, American Heart Association, Medical Council of India, European Society for Cardiology Recognized EECP is fully safe, without any known side effects.

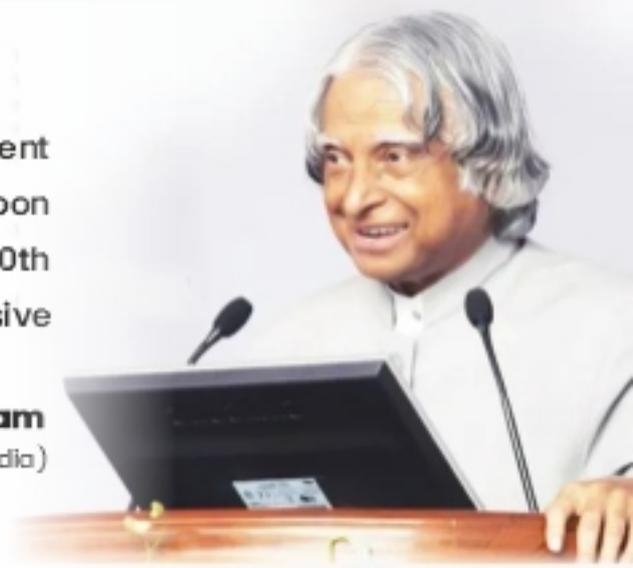

### Duration of EECP

1 Session of EECP is given for 1 Hour Typically involves 35 to 45 sessions for full course & 15 Sessions for minor / preventive cases

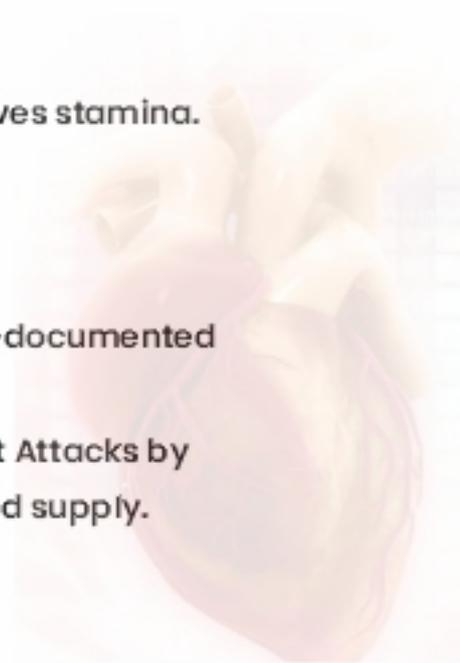

"In 70's bypass surgery was the big news in the treatment of coronary artery disease. In the 80's, it was balloon angioplasty. In the 90's it was stent and now in 20th century we move a step further to a totally non-invasive treatment with **EECP**"

**-Dr. APJ Abdul Kalam**  
(Former President of India)

## What are the benefits of EECP Therapy?

- ♥ It is US FDA Approved ,very affordable and it dose not involve surgery .
- ♥ It significantly reduces chest pain, breathlessness and improves stamina.
- ♥ EECP does not require hospitalization, It is only a walk-in and walk-out process/session each time.
- ♥ EECP reduces the patient's anti-angina medication needs.
- ♥ The benefits of EECP have been scientifically proven and well-documented around the world.
- ♥ It further reduces the risk of Heart failure and secondary Heart Attacks by developing New collateral vessels and improving heart's blood supply.
